Don't Take A Knife To A Gun Fight - Solutions For Failing Alloy Absorbers

Your stainless steel absorber is corroding. You must evaluate options to immediately arrest ongoing damage and preclude any further damage to your vessel. The reasons for the corrosion are debated endlessly but you need to make power reliably and right now.

When the situation calls for expert, responsive action, call in the big guns at Universal Blastco. Universal Blastco, with the industry's broadest experience, offers recovery through the use of glazed ceramic tile or organic resin lining systems to preserve your capital investment and is the only single source contractor with the industry expertise and experience in resin and tile linings for FGD vessels that can deliver the punch you need when the chips are down. Don't take any further operational risk by relying on unproven resources.

Finally, a choice in ceramic tile lining and concrete absorber construction options - **Cera-Corr™ Systems** - visit www.isginc.us to learn more about Cera-Corr. Or contact us at info@isginc.us and put the United States' largest and most experience FGD linings contractor to work for you in designing and implementing a cost effective, rapidly deployable long term solution to your crisis.
