## Scrubber Design, Material and Cost/Risk Optimization

The decision process for selecting the optimum combination of design/materials and the associated cost/risk relationship for your FGD scrubber module contains many variables.

With the industry's broadest suite of solutions with unlimited chloride resistance, Universal Blastco is uniquely equipped to assist you in the selection of either a concrete or steel shell material complemented with ceramic tile, organic resin or an optimized combination of the two.

Universal Blastco will then design and construct your concrete/tile scrubber vessel or select and install the appropriate lining in your steel shell with a long term warranty commitment.

Finally, a choice in ceramic tile lining and concrete absorber construction options - **Cera-Corr™ Systems** - visit [www.isginc.us](http://www.isginc.us) to learn more about Cera-Corr. Or contact us at [info@isginc.us](mailto:info@isginc.us) and put the United States' largest and most experience FGD linings contractor to work for you in solving the toughest corrosion challenges in the industry today.
